

HYGIENIC VALVE PROGRAM

TECHNICS IN STAINLESS STEEL FOR FOOD,
CHEMICAL AND PHARMACEUTICAL INDUSTRIES

Hygienic Valves

Our ideas — your advantages

N1

- / valve body from **solid bar** – many mounting positions possible depending on draining
- / optimum cleanability
- / interior surface $Ra \leq 0,8 \mu m$ (32) (standard)
- / optional interior surfaces available upon request
- / no sump or dome in product space
- / **no dead space**
- / valves available meeting **3-A standards**
- / **gentle** product handling
- / easy maintenance without special tools
- / minimal downtime
- / tube outlets available as DIN, OD tube and ISO
- / seals conform with FDA, 3-A
- / thanks to the **building block system** change to aseptic type is simple
- / **long stroke and full stroke valves** are available
- / The **pneumatic actuator** can be ordered as „air to open/spring to close“, „spring to open/air to close“ or „air/air“.
- / **A 3-position actuator** permits simple static dosing processes.
- / proximity switches and control tops optional

Inclined-seat valve

Change-over valve
two-part valve body
alternatively one-part valve body

Bottom seat valve

Overflow valve ÜS
optional manual operation

Overflow valve E8
with T-body

Safety valve SHF
TÜV approved

Hygienic overflow valve ÜS

protect your process and equipment

Rieger overflow valves type ÜS open when the set pressure is reached to prevent excess pressure in piping or systems.

These are not safety valves. If safety valves are required, we recommend our TÜV approved safety valves type SH (see page 10).

Data

- / valve body from solid bar
- / standard with weld ends – other optional connections available
- / optional with lever for lifting in type ÜS or pneumatically lifted in type E8

Hygienic overflow valve E8

for a safe pressure reduction

The Rieger overflow right angle valve E8 is a combination of right angle and overflow design. The desired pressure is adjustable, with a valve stroke as high as possible.

Unlike an overflow valve this valve can be opened up to 100% – like an angle valve.

Will protect positive pumps.

A body clamp union between valve body and actuator, starting from size DN 25 (1") can be removed with simple hand tools.

The overflow valve type E8 is suitable for liquid media. It is not a safety valve. For this purpose, we recommend our TÜV approved safety valve type SH (see page 10).

Data

- / standard pressure range 0,5 to 6 bar
- / optional: higher set pressures upon request
- / protects pumps, pipelines and equipment
- / also available as 3-A version

Hygienic safety valve SH

with TÜV-approval for gas and steam

The RIEGER safety valve type SHF prevents impermissible excess pressure for vaporous and gaseous media in system components and tanks.

The set pressure is generally greater than the operating pressure of the system. The valve opens with full stroke as soon as the pressure exceeds 10 %.

The pharmaceutical, chemical and biotechnology industries as well as the cosmetics, beverage and food industries are the ideal areas of application for the RIEGER safety valve.

Your Benefits

- / Above-average blow-off performance in the benchmark
- / More compact design thanks to smaller nominal diameters
- / Reduced capital investment for your system or machine
- / Versatile use for vapors, gases and liquids
- / Can be flexibly integrated into your system or machine
- / Aseptic design for hygienic and aseptic areas
- / Available with EPDM diaphragm
- / Choice between pneumatic and manual versions (with lever)
- / Optionally with initiator for position feedback

Data

- / valve body from solid bar
- / no dead spaces
- / easy maintenance without special tools
- / range of setting – see catalogue
- / additionally liftable – pneumatic and/or with lever during cleaning

Rieger regulating (control) valves are designed to meet the highest process demands of hygiene and safety.

Ideal applications include the dairy, beverage, brewery, food, pharmaceutical, biotechnology and personal care industries.

Thanks to the building block system the change between aseptic and hygienic design – and between manual or pneumatic actuator is possible.

Regulating valves are engineered to meet customer's specific processes requirements.

Hygienic regulating valve E

providing product control at desired flows

also available as 3-A version

Rieger double seal valves are used for reliable separation of product from cleaning agent. The leakage space is situated between the separating gaskets. The leakage fluid flows through two leakage valves.

Data

- / valve body from solid bar
- / no dead spaces
- / safe CIP/SIP-cleaning
- / inexpensive alternative to mix proof valves e. g. in CIP-clusters
- / used in beverage and food plants
- / also available as 3-A version

The RIEGER double seal valve **piggable version N4** allows potential savings for products, water and cleaning chemicals in combination with a pigging station.

Reduced environmental pollution plus additional product savings shorten the Return On Investment (ROI) and amortization period.

Data

- / valve body from solid bar
- / no torsion when welded
- / only 4 seals in product space
- / safe CIP/SIP cleaning
- / maximum product recovery
- / minimal CIP water consumption
- / minimal CIP chemical consumption
- / lowers waste water costs
- / registered design

Two-way connection between
main and CIP valve

Hygienic mix proof valve N1

reliable separation of liquids

A³

also available as
3-A version
N2 PMO 3-A

Valve structure

- / valve body from solid bar
- / radial sealing of both valve seats
- / balanced valve disks

Easy of servicing

- / only 4 seals in product space
- / change of seals without special tools
- / service possible without compressed air
- / minimal downtime
- / light: valve DN 100 (4") only weighs 35 kg (77 lbs)

Product protection

- / stroking without product loss
- / safe media separation of both product lines
- / closing force up to 10 bar (145 psi)
- / water-hammer safe up to 30 bar (435 psi)
- / CIP-cleaning and SIP-sterilization automation
- / For CIP-cleaning both seats are lifted in turns.
- / also available as 3-A version

For additional ports and/or other port configurations than standard please specify ports with letters. Port configurations in 360° possible.

Operating mode

L3 – compressed air connection for stroking the upper valve disk

L2 – compressed air connection for stroking the lower valve disk

Valve closed

L1 – compressed air connection for opening the valve

Hygienic mix proof change-over valve N3

Valve structure

- / based on the N1 technology with additional change-over function
- / two-part valve body – lower body turnable
- / optional three-part valve body – all bodies turnable
- / upper valve seat can be stroked upwards and downwards
- / also available as 3-A version

Hygienic mix proof bottom seat change-over N9

Rieger offers mix proof bottom seat valves where additionally the function of a change-over valve is utilized.

The advantage is the pipeline is not filled during filling or emptying of multiple vessels. The pipeline is only open while the vessel is filled. This avoids an additional risk of contamination caused by otherwise necessary shut-off valves.

Valve structure

- / valve body from solid bar
- / for product pressure in the tank up to 4 bar (58psi)
- / also available with separate weld-in flange
- / also available as 3-A version

pipe connection

weld-in flange

Hygienic mix proof bottom seat valve N5

Valve structure

- / with weld-in flange
- / optional vessel connections available
- / can be stroked on both sides
- / available with only one outlet
- / for product pressure in the tank up to 4 bar (58psi)
- / also available as 3-A version

Operating mode

Material	in contact with product	1.4404/AISI 316L	
	optional	1.4435/AISI 316L (others on request)	
	not in contact with product	1.4301/AISI 304	
Product contact seals		EPDM (FDA)	PTFE (FDA)
Temperatures	for continuous operation	130 °C* 266 °F	121 °C 250 °F
	for sterilization	150 °C* 302 °F	135 °C (for a short time) 275 °F (for a short time)
Pressure	operating pressure	max. 6 bar (standard) - higher upon request max. 87 psi (standard)	
	controlled pressure	min. 6 bar – max. 10 bar min. 87 psi – max. 145 psi	
Surfaces	in contact with product	Ra ≤ 0,8 µm [32]	
	not in contact with product	rotated, Ra ≤ 1,6 µm [63]	
	optional	higher quality surfaces on demand e.g. electro polished	
Connections	standard	weld end	
	optional	all common threads and flange connections

Our valves in operation

... in dairies, for food and beverages

New production techniques and a high safety of process equipment are the challenges of the future. RIEGER valves make a contribution to achieve a maximum of productivity, safety and quality in dairies, food and beverage industry.

Strictly made of solid bar, the valve bodies even comply with very high requirements in terms of puncture resistance, absence of distortions and stability. Precisely tailored, either as single valve or combined to valve blocks, they accurately fit in installations while being exchangeable among each other.

The building block system allows unproblematic change between manual and pneumatic actuation as well as between hygienic and aseptic realisation. Equally, a modification of the sealing system is simple – from “spring close / air open” to “spring open / air close” and vice versa.

Thus, RIEGER valves are easily adaptable to changing process requirements. We adapt our valves to your process. So you don't have to adapt your process.

The RIEGER valve range stands for reliability in process control and installations

... in pharmaceutical, chemical and bio-engineering industries

Aseptic production equipment in the area of the pharmaceutical and biotechnological industry set new benchmarks for aseptic components such as valves. These are only met with a consequent selection of materials and an uncompromisingly aseptic realisation.

Integrated into pharmaceutical installations for absolutely clean applications, RIEGER valves successfully demonstrate their excellent aseptic properties since years by hermetically separating products from the environment.

RIEGER valves can be found all over the world. Whether Europe, Asia, Africa, Oceania or America – they call every continent and every climate zone their home.

As a renowned German company and part of the worldwide operating NEUMO Ehrenberg Group, RIEGER disposes of the necessary economic capacity and international experience to supply all markets.

Whether bottom seat valves for fermenters, inclined seat valves with bottling functions or sampling valves, the emphasis of construction is always laid on the proper aseptic operation of the valve.

The company

The company Gebr. Rieger is a company with a long tradition.

It was founded in 1879 as a machine factory in the center of Aalen.

Today, Rieger, with its departments for process technology and aluminum foundry, is a member of the globally operating NEUMO Ehrenberg Group.

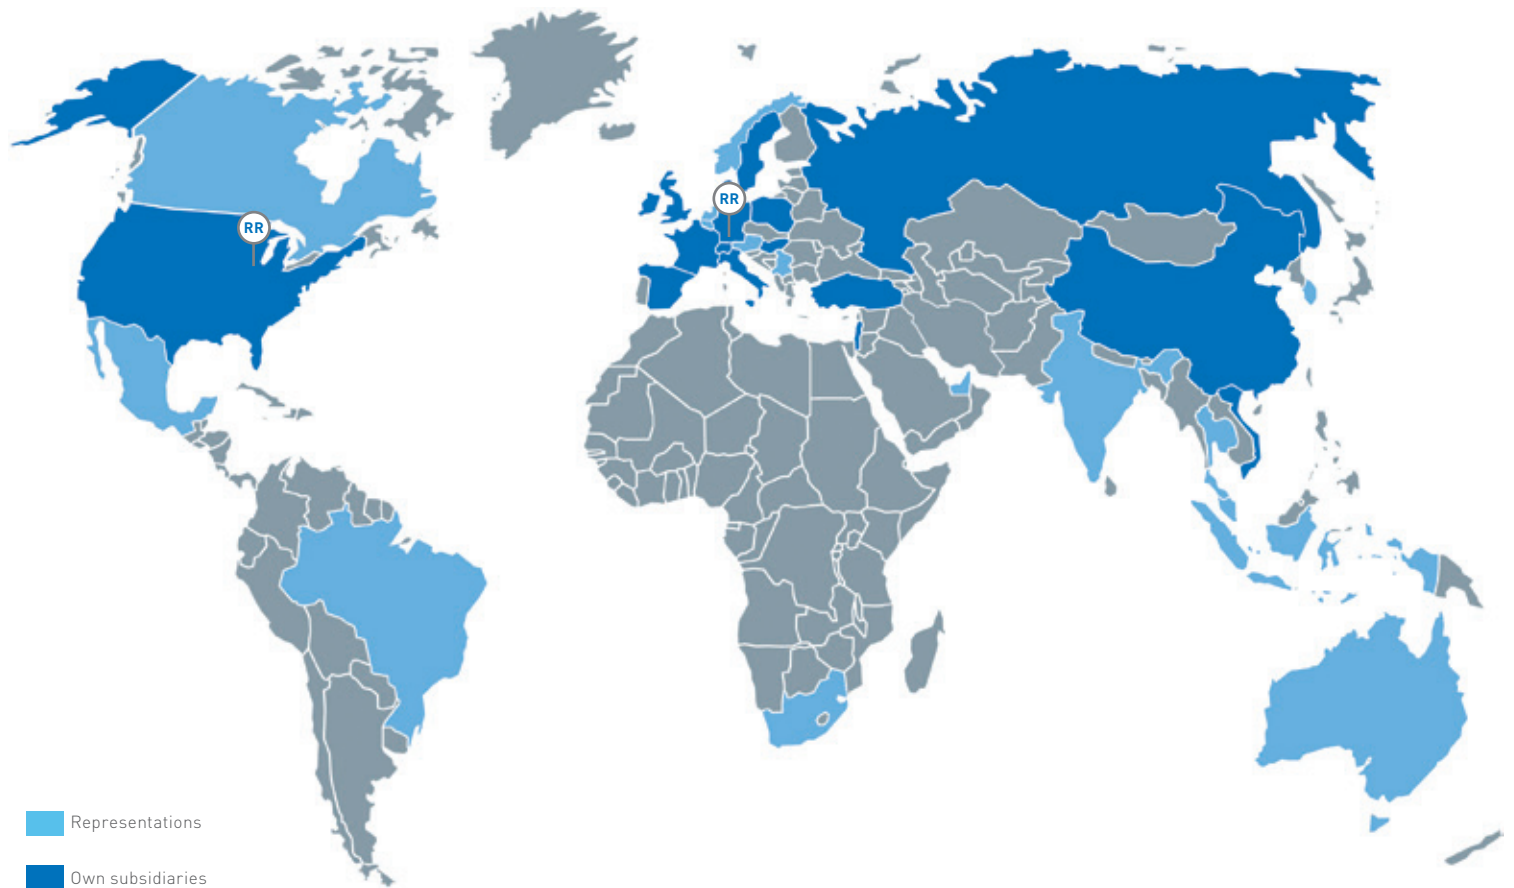

Rieger process technology successfully competes in the areas of armatures, valves and welded constructions. All products are basically made of stainless steel, offering the full range of stainless steel types from AISI 304 via 316 L up to hastelloy® steel and special materials.

Foundation

The **Neumo Ehrenberg Group** is a family run holding, which is operating worldwide with more than 2.100 employees.

Since 1958 **Gebr. Rieger** has been a member of the Neumo Ehrenberg Group. In our department process technology Rieger is successfully working in the **fields of valves, customized solutions**, such as **valve blocks** and **tubular structures** as well as **system engineering**, which includes **valve clusters, units, CIP-systems** and all kinds of **plug and play solutions**.

By its global approach Rieger gained international attention in the markets of **food, beverage** and **pharmaceutical industries**.

Besides the **Sampling Valves** the valve range also includes **Mix Proof Valves, Filling Valves** and **Pigging Systems**.
